Press Release

Notice Regarding the Operation of Automated External Defibrillator (AED) Medical Equipment at Tribhuvan International Airport

In order to ensure the health and safety of airport users and air passengers, Automated External Defibrillator (AED) medical equipment has been brought into operation at International Terminal (both Arrival & Departure) to provide immediate first aid in emergency situations.

Passengers and other airport users may occasionally experience serious health problems such as sudden unconsciousness, breathing difficulties, or suffocation. In such emergencies, failure to receive timely and appropriate medical attention may put lives at risk. Keeping this in view, AED medical equipment has been installed and made operational.

This medical device plays a crucial role in saving lives by delivering prompt assistance to individuals experiencing cardiac or respiratory emergencies. It is expected that the availability and use of this equipment will facilitate timely primary treatment for those who suddenly fall ill.

Furthermore, in the first phase, training on the operation and proper use of this equipment has been provided to concerned staff of Tribhuvan International Airport, as well as personnel from medical units (Health Desk, KMC Hospital, and HAMS Hospital). This initiative is expected to significantly enhance the effectiveness of emergency response management.

The airport management also plans to further expand such health and safety services and equipment in the future.
